

CHAPTER IV

CONCLUSION AND SUGGESTION

This chapter presents the conclusion and suggestions concernin the result of the research. The conclusion is taken based on the research finding and discussion that have been explained before. The following are the conclusion and suggestions.

A. Conclusion

Based on the discussion, the researcher draw conclusions about the experience of English teachers at SMP Negeri 4 Watampone in making and applying item analysis to the tests they made and how the quality of the tests was analyzed through the item analysis program as follows:

1. Based on the results of the item analysis on the multiple-choice English test made by the teacher of SMP Negeri 4 Watampone, several invalid items were obtained. This is because there are some items that have a very low level of difficulty that makes it easy for students to answer and there are items that are very difficult for students, besides the number of improper items is greater than the proper items and the reliability level of the test is low.
2. From the results of interview, it is known that the English teachers of SMP Negeri 4 Watampone apply item analysis to the tests that they feel need to be analyzed and they get a positive impact from the results of the analysis, but unfortunately the item analysis they apply is not the item analysis expected by

the researcher, but the teacher only analyzes test quality based on their prejudices only.

B. Suggestion

Based on the conclusion above, the researcher will give suggestions to all readers and especially for teachers:

1. For the Teachers

To get good students' learning outcomes, approaches and strategies in teaching are very necessary, but it is important to note that the quality of the test also plays an important role. With a good test, students can get good test results as well. To get a good test, teachers need to sort out the tests they make, namely by analyzing each test item with predetermined stages, not just prejudice.

2. For the Other Researchers

Especially for future researchers, it is better to start from now on to learn about the research methodology and this research can be a reference for making other research related to this research.
